NumTrix+

FOR PARENTS OF YEARS 4, 5 AND 6

Focus on the topics that matter

The same topics come up in the SATs year after year. NumTrix+ puts your child's practice time where the marks are.

Where the SATs marks are

From our analysis of the KS2 SATs papers, 2016 to 2026.

94% of the 2026 arithmetic paper was calculations, fractions, decimals and percentages

65% of reasoning marks come from place value, calculation, and fractions, decimals and percentages

90% of reading marks are for finding information, working out meaning and word meanings

About half the marks reaches the expected standard (56 out of 110 in maths in 2026)

How NumTrix+ uses this

1. **Most marks first**
   Daily practice leans towards the topics worth the most.
2. **Mistakes explained**
   See why, then try a similar question.
3. **Ten minutes a day**
   Plus Arithmetic Sprint, spelling and times tables.

10 minutes a day adds up to over 30 hours of practice before the SATs.
